## Lighting System

Menu-controlled lighting system.

### Features

- Change color, alpha, glow, fullbright, intensity, radius, falloff
- Color and alpha can be changed independently for *on* and *off* state
- Linkset or region
- Unlimited number of light groups
- Access control: public, group, owner, group+owner
- Store default settings in notecard
- Particle effects: bling, candle flames, fire, halo, starbling, starburst
- Plugin support: call the menu from other scripts
- Add your own extension button
- Light up any combination of prim faces (option)
- Set base intensity to prevent light flooding from many light sources
- Add more switches to the same light group but never get out of sync
- Universal remote control: secondary switch for both linkset and region
- Control panel for up to 9 light groups
- Presets: support for 11 notecards, choose from menu
- Light without bulbs (option): only two scripts for any number of light sources
- Useful tools: color converter, face picker, remove floating text
